## CABERNET SAUVIGNON

**Grape Variety** Cabernet Sauvignon (red grape).

### Description

A French native, originally from the area known as Bordeaux. This variety is best known to the world as being capable of great adaptability to different climates and soils. It seems to have been generated from a spontaneous cross between Cabernet Franc and Sauvignon Blanc. The grape skin is thick and rich in substances, with longer maceration the wine will be enriched with polyphenols and structure. Its aroma, instead depends on the area, the type of soil and the maturation at harvest time.

### Sensory Notes

A deep ruby red color, almost purple, it recalls the scent of the forest, black currants, blueberries and blackberries, with slight hints of herbs. Full bodied, aromatic, it becomes refined with age, the taste is elegant, with a smooth taste and unaggressive tannins.

### Pairings

First course: risotto with truffles or mushrooms, lasagna or pasta with meat sauce.  
Second course: red meat, roasted or grilled. Vegetables such as radicchio, peppers, truffle or porcini mushrooms.
